# 4 Function Remote Control (GM Single / Single)

\*This is not a reset button. Pressing this button will erase the code. Recoding requires access to the receiver.

There are no wires from the switch to the motor. Having a direct connection from the switch to the motor will cause a direct short. The wires shown above must be the only wires in the system. The window will reverse direction each time the remote is used. Call (502) 384-6911 or email support@ball'sshotrods.com for technical help.
